 Davis, CA  +1 530-760-6834  urmilchandarana@gmail.com  [linkedin.com/in/urmilchandarana](https://www.linkedin.com/in/urmilchandarana)  github.com/DimitriBelikov

EDUCATION:

University of California, Davis

Master of Science in Computer Science

Sept 2025 - Present

GPA: 4.0 / 4.0

Relevant Coursework: ECS 265: Distributed Database Systems; ECS 235A: Computer and Information Security

K.J. Somaiya College of Engineering, Mumbai

Bachelor of Technology, Computer Engineering

Aug 2018 – Jun 2022

GPA: 9.4 / 10

Relevant Coursework: Advanced Algorithms; Design and Analysis; Operating Systems; Full Stack Development; Computer Network; Blockchain; Cloud Computing Emerging Technologies.

WORK EXPERIENCE:

Associate Consultant (Software Development Engineer)

Oracle Financial Services Software Limited

Pune, India

Aug 2022 – Jun 2025

- Engineered 10+ core banking modules for the Oracle Banking Digital Experience (OBDX) platform, using **Spring Boot, Java 8, REST APIs/SOAP APIs & Microservices** for a major European Bank.
- Streamlined **DevOps pipelines**, reducing manual intervention by 30% using tools including **Jenkins & Gradle** and implemented automation guidelines to enhance team efficiency.
- Orchestrated the migration from a frequent traditional application setup to a **containerized environment** using **CI/CD pipelines & Docker**, reducing environment setup and deployment time by 85% while achieving 100% environment parity across SDLC stages.
- Spearheaded the development and delivery of critical modules, including a Login system via CAS & Bill Payment Functionality, ensuring seamless integration under tight deadlines alongside collaborating with clients.
- Led 7 product patch set upgrades, ensuring meticulous planning and error-free execution and acted as a technical SPC (Single point-of-contact) for client stakeholders.
- Optimized team efficiency by 75% through 10+ technical enablement sessions and multiple requirement workshops; successfully mitigated requirement-related bugs and accelerated the adoption of new product features.

Jr. Development Intern

Aloyt – The Technology Company

Mumbai, India

Apr 2021 – Jul 2021

- Architected and deployed a cross-platform mobile application using **Flutter** and **Django**, enabling real-time speech-to-speech translation for regional Indian dialects to bridge communication gaps for local farmers.
- Engineered a low-latency Python-based translation pipeline on the backend, integrating advanced speech-processing modules to handle complex linguistic nuances with 92% translation accuracy.
- Optimized end-to-end latency by 40% through the implementation of asynchronous processing and efficient data streaming between the Flutter frontend and Django backend, ensuring a seamless walkie-talkie user experience.
- Designed a scalable API infrastructure to manage concurrent audio streams, utilizing optimized request-handling to maintain system stability during peak usage hours.

TECHNICAL SKILLS:

Programming Languages

Java, C++, JavaScript, Python, SQL, TypeScript, HTML5

Libraries & Frameworks

Spring Boot, Node.js, Django, FastAPI, Flutter, Next.js, React.js, Tailwind CSS

Tools / Cloud

Bazel, Gradle, Maven, MongoDB, DynamoDB, Redis, Docker, Kubernetes, Jenkins, Git, GitHub Actions, AWS, OCI

PROJECTS:

Smart Crowdfunding Using Blockchain 🔗

Oct 2021 – Nov 2022

React.js, Node.js, MongoDB, Blockchain, Solidity, Ganache, Ethereum, Bootstrap 5

- Engineered a decentralized crowdfunding platform using **Ethereum Smart Contracts, MongoDB, Express, React.js** and **Node.js**, eliminating intermediaries to ensure 100% transparency in fund allocation.
- Architected a democratic governance model using **Solidity** where fund releases are gated by a custom-built voting mechanism, requiring a majority consensus via smart contract logic before capital distribution.
- Designed and documented the full System Architecture, including **RESTful API endpoints, Database Schemas**, and sequence diagrams, ensuring seamless integration between **Web3 providers (Ganache)** and the frontend.
- Optimized transaction security and reliability by implementing rigorous testing and debugging of smart contracts, addressing critical vulnerabilities and ensuring **DApp** integrity.

AniFinder – An Animal Classification Application 🔗

Apr 2021 – May 2021

Flutter, Machine Learning, Python, Supervised Learning, Convolutional Neural Network (CNN)

- Engineered **AniFinder**, a full-stack mobile application for real-time animal classification, leveraging **Flutter** and **Dart** to deliver a seamless, high-performance UI/UX tailored for educational use by children.
- Developed and trained a **Convolutional Neural Network (CNN)** on a dataset of 10k+ images, utilizing **TensorFlow** to achieve 89.7% classification accuracy for diverse animal species.
- Optimized on-device performance by integrating the trained CNN model directly into the Flutter application, reducing server round-trip latency and enabling real-time image processing for captured and uploaded media.
- Architected the end-to-end data pipeline, including custom image preprocessing scripts and a dynamic results interface that displays species-specific metadata and educational content.
