EDUCATION:

University of California, Davis

Master of Science in Computer Science

Sept 2025 - Present

GPA: 4.0 / 4.0

Relevant Coursework: ECS 265: Distributed Database Systems; ECS 235A: Computer and Information Security

K.J. Somaiya College of Engineering, Mumbai

Bachelor of Technology, Computer Engineering

Aug 2018 – Jun 2022

GPA: 9.4 / 10

Relevant Coursework: Advanced Algorithms: Design and Analysis; Operating Systems; Full Stack Development; Computer Network; Blockchain; Cloud Computing Emerging Technologies.

WORK EXPERIENCE:

Associate Consultant (Full Stack Engineer)

Oracle Financial Services Software Limited

Pune, India

Aug 2022 – Jun 2025

- Engineered and delivered full-stack features for the **Oracle Banking Digital Experience (OBDX)** platform, using Spring Boot, Core Java, and OJET for a major European Bank.
- Streamlined DevOps pipelines**, reducing manual intervention **by 30% using tools including Jenkin & Gradle** and implemented automation guidelines to enhance team efficiency.
- Orchestrated the migration from a frequent traditional application setup to a containerized environment** using Docker, reducing environment setup and deployment time **by 85%** while **achieving 100% environment parity** across development and production.
- Spearheaded the development and delivery of critical modules, including a **Login system via CAS & Bill Payment Functionality**, ensuring seamless integration under tight deadlines alongside collaborating with clients.
- Led 7 product patch set upgrades**, ensuring meticulous planning and error-free execution and **acted as a technical SPC (Single point-of-contact)** for client stakeholders.
- Optimized team efficiency by 75%** through **10+ technical enablement sessions** and multiple requirement workshops; **successfully mitigated requirement-related bugs** and accelerated the adoption of new product features.

Technologies / Frameworks Used: **Java 8 (Advanced), JavaScript, SQL, HTML, CSS, OJET, Spring Boot, Gradle, Jenkins, Subversion (SVN), Maven, DevOps, Docker, AWS, Microservices**

Jr. Development Intern

Aloyt – The Technology Company

Mumbai, India

Apr 2021 – Jul 2021

- Developed a multilingual voice translation Flutter app with a Django backend; **achieved real-time translation for numerous regional languages** by integrating Google's Speech-to-Text and Text-to-Speech APIs.
- Reduced translation latency by 50% through optimizing API call** sequences and implementing a Python-based language conversion module.

Technologies / Frameworks Used: **Flutter, Python, Django, Google APIs**

Python Intern

Swabhav Techlabs

Mumbai, India

Jan 2021 – Mar 2021

- Acquired a solid foundation in Python, Django, Flask and Git, applying these technologies to an application development project.
- Successfully developed a Django application as part of a team project, demonstrating hands-on expertise in full-stack development using MySQL and API Development.

Technologies / Frameworks Used: **Python, SQL, HTML, Bootstrap 5, Git, Django, Flask**

TECHNICAL SKILLS:

Programming Languages

Java 8 (Advanced), C++ (Advanced), Python, HTML, CSS, JavaScript, SQL, NoSQL

Frameworks

Spring Boot, React JS, Node JS, MERN, FastAPI, Django

Tools / Cloud

Bazel, Gradle, Maven, Docker, Jenkins, Git, SVN, Microservices, Apache Tomcat, Active MQ, AWS

PROJECTS:

Smart Crowdfunding Using Blockchain

React JS, Node JS, NoSQL, Blockchain, Solidity, Ganache, Ethereum, Bootstrap 5

Oct 2021 – Nov 2022

- Developed a transparent crowdfunding platform using Blockchain technology and **Smart Contracts** to enhance accountability and trust. Addressed key issues in traditional crowdfunding platforms by introducing decentralized features that ensured secure and efficient transactions.
- Implemented the project using **Ethereum Chain Nodes, Smart Contracts**, and the **MERN Framework** for seamless front-end and back-end integration. Used **Ganache** for local Ethereum testing & debugging DApp.
- Designed a unique voting mechanism** within the application where smart contract communication would ensure funds were released only upon achieving a majority vote, **promoting contributor oversight**.
- Engineered the product's architectural roadmap**, overseeing the integration of Ethereum chain functionalities, creating product design documents like Use Case Diagrams, Sequence Diagrams etc., planning database & APIs schemas.

AniFinder – An Animal Classification Application

Flutter, Machine Learning, Python, Supervised Learning, Convolutional Neural Network (CNN)

Apr 2021 – May 2021

- Designed and developed AniFinder, a mobile application for animal classification, using **Flutter** for a seamless user experience.
- Enabled functionality for users (toddlers/kids) to upload or capture images directly through the application. Trained and integrated an **ML model** on a comprehensive animal dataset with an efficacy of **89.7%**, ensuring accurate classification of animal species.
- Implemented end-to-end workflows, including **image preprocessing, CNN model training**, and result display within the app (which included the animal species and information). **Optimized performance by integrating the trained CNN model directly** into the Flutter application, ensuring efficient and real-time classification.
